

Data Science Studio

Powered by Rubiscape

RubiStudio is a AI-ML MODEL BUILDER!

RubiStudio is a multi-persona Data Science & Machine Learning platform that empowers both data scientists and business users to build and manage ML models with ease and speed. RubiStudio brings a visual interface to build, train and deploy ML models at scale using tools like notebooks, debuggers, profilers, pipelines, MLOps, and more – all in one integrated development environment (IDE).

Key Features

 Connectivity	Supports CSV, Excel, SQL Databases, APIs and Cloud Storage	 Collaboration	Enables team collaboration with role-based access, version control and code management
 Data Prep	Data cleaning, enrichment, versioning and lineage tracking capabilities	 MLOps	Model deployment, performance monitoring and retraining
 Model Building	Visual interface with pre-built algorithms for classification, clustering, regression	 Security	Data encryption and protection, compliance with industry standards
 Data Exploration	Interactive data exploration tools for Statistical Modeling	 Support	Help Central, User Community and Enterprise Support Plans available
 ML Model	Model training, tuning, evaluation, optimization and AutoML capabilities	 Pricing	Starting at an affordable monthly starter pack, with enterprise plans available

Benefits

Accelerated time-to-market

Rapidly build and deploy data science projects

Improved collaboration

Break down silos between data scientists and business users

Increased productivity

Reduce coding time and focus on business value

Enhanced Performance

Leveraging automated optimization techniques

Testimonial

"RubiStudio came very handy for us with its pre-built feature store of a wide range of algorithm and libraries available on a finger tips, and a very easy to use interface to built model and deploy them instantly. Integrated environment for data explorations nd data visualisation, reduced significant time and effort in our data science lifecycle.
